Lambda > Functions > Create function
x86_64
Permissions Info
By default, Lambda will create an execution role with permissions to upload logs to Amazon CloudWatch Logs. You can customize this default role later when adding triggers.
Change default execution role
Execution role
To access other AWS services and resources your function needs an IAM role. Choose a role with the right permissions for your function.
Create default role
Use another role
Julianparra_evaluacion_modulo2
Create new role
View role details in IAM
Additional configurations
Use additional configurations to set up networking, security, and governance for your function. These settings help secure and customize your Lambda function deployment.

Successfully created the function **Listar-ec2**. You can now change its code and configuration. To invoke your function with a test event, choose "Test".

```python
import boto3

def lambda_handler(event, context):
    ec2 = boto3.client('ec2')

    response = ec2.describe_instances()

    for reservation in response['Reservations']:
        for instance in reservation['Instances']:
            print("ID:", instance['InstanceId'])
            print("Estado:", instance['State']['Name'])
            print("Tipo:", instance['InstanceType'])
            print("----------")

    return "Consulta realizada"
```

Successfully updated the function **Listar-ec2**.

Executing function: succeeded (logs)

Details

Test event Info

Delete | CloudWatch Logs Live Tail | Save | Test

To invoke your function without saving an event, modify the event, then choose Test. Lambda uses the modified event to invoke your function, but does not overwrite the original event until you choose Save.

Test event action

- Create new event
- Edit saved event

Invocation type

- Synchronous
  Executes the Lambda function and blocks until receiving the function's response, with a maximum timeout of 15 minutes. Returns function output or error details directly to the calling application.
- Asynchronous
  Enqueues the Lambda function for execution and returns immediately with a request ID. Function processes independently, with results optionally sent to a configured destination like SQS, SNS, or EventBridge.
